DATACELL REMOTE PANELS

MERLIN
POWER

Used in combination with a Merlin DataCell, Merlin's DataCell Remote Panels arm you with critical information such as time to run until flat and exact state of charge from a remote mounting location.

Offering flexible installation to suit your application, Merlin's DataCell units can be connected to a remote panel. This gives a physical panel that can be mounted in a remote location from the DataCell unit to provide all data. The remote panels are available in two formats: intuitive LCD alphanumeric screen or, large format LED for easy reading from a distance. These panels are 'plug and play' with both DataCell 1 and DataCell 2.

– **Flexible installation**
  allowing you to access DataCell data from a remote location.

– **Multiple display options**
  with a choice between LCD and LED depending on your application requirements.

– **Comptabile with both DataCell 1 and DataCell II units**
  ensuring a "plug and play" experience.
