GENERATOR/ SHOREPOWER CHANGEOVER UNIT

Designed to automatically switch between two sources of AC power, with the inclusion of a timer. When the generator is started, the unit will not switch to generator power until the preset time has elapsed. This allows the generator to start, lubricate and warm up before load is applied, reducing generator wear and extending its life.

The timer delay is configurable between 0.1 second and 24 hours.

The changeover unit is biased towards the generator. Therefore if the shore line is plugged in and the generator is started, generator power will prevail.

Suitable for petrol, diesel and engine driven generators.

- **Pre-wired AC Distribution Boxes**
- **Massively reduces complexity of installing AC electrics**
- **Ensures reliability, correct wiring & safety**
- **Reduces installation time and cost**
- **IP66 Rated cabinets**
- **5 year warranty**
