

POWERBANK REMOTE PANELS

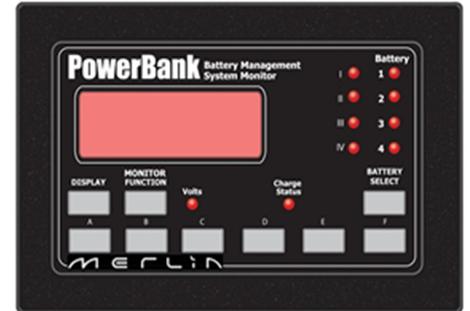

Used in combination with a Merlin PowerBank, Merlin's PowerBank Remote Panels arm you with critical information from a remote mounting location.

Offering flexible installation to suit your application, Merlin's PowerBank units can be connected to a remote panel. This gives a physical panel that can be mounted in a remote location from the PowerBank unit to provide all data.

The remote panels are available in two formats: intuitive LCD alphanumeric screen or, large format LED for easy reading from a distance.

These panels are 'plug and play' with the PowerBank automatically determining how many batteries and which MerlinNET components are connected, allowing it to automatically configure to your application.

- **Flexible installation**
allowing you to access PowerBank data from a remote location.
- **Multiple display options**
with a choice between LCD and LED depending on your application requirements.
- **Programmable control buttons**
allow for remote switching of batteries, emergency parallel and flat battery protection reset functions.
- **Easy to use**
with automatic configuration and detection of batteries with the ability to scroll between each connected battery.
